

(From Oral session Connectivity: States & traits, skipped others)

## Brain Network Connectivity Architecture of Ego Dissolution under LSD

— Devon Stoliker

(Turner Institute, Monash University)

- Default Mode Network (DMN) : subjective focus ] one active
- Dorsal Attention Network (DAN) : objective focus ⇒ other inactive  
i.e. anticoerrent interactions
- Recent work shows DMN-DAN anticoerrent mediated by Salience Network (SN)
- Applied Dynamic Causal Modelling (DCM)
  - Bayesian framework to infer effective connectivity  
Describe ↓ how activity in one region influences other regions
